

## Material Properties

Dansk outdoor leather is a high-quality upholstery material specifically designed for outdoor applications. The material is constructed from 88% PVC compound, 10% knitted polyester and 2% nano compound. The innovative nanotechnology surface structure makes the material exceptionally weather-proof, dirt resistant and durable. Dansk outdoor leather is also UV and salt-water resistant, flame resistant, chlorine resistant and abrasion resistant (100,000 Martindale cycles).

## Cleaning

It is important that your furniture is cleaned regularly and we recommend that you use a micro-fibre cloth or a soft hand brush with warm detergent solution every few months or when the furniture looks like it needs cleaning. The frequency will depend on your furniture's location and its exposure to vegetation and airborne pollution. A microfibre cloth or soft brush should be used to apply the detergent solution. Gently work in the detergent solution to remove any dirt, then wipe any trace of the detergent off with a new cloth rinsed in clean water. Thoroughly dry the entire area treated with a clean, dry cloth.

Do not use solvents, chlorides, polishes, abrasives, chemical cleaning agents, dry cleaning materials, wax polishes or leather detergents.

Severe stains should be removed immediately by utilising, if necessary, benzene. Ink stains must be removed immediately.

Please note that permanent discolouration may be caused by jeans or other heavily dyed textiles.
