

## POLYWOOD™ CARE & MAINTENANCE

POLYWOOD™ material is made of HDPE plastic resin that has been purified and UV protected. It is generally cared for and cleaned with soap and warm water. For certain stains and additional cleaning power, a 1/3 bleach and 2/3 water solution can be used on the product without affecting the color. Also, a popular method of cleaning is a high pressure power wash. (Not to exceed 1,500 psi, which is the equivalent of a car wash.) The surface characteristics of the product may require the use of a soft bristle brush to get into the creases.

The hardware used in the assembly and construction of our furniture is an 18-8 commercial grade stainless steel that has an additional Xylan® protective and cosmetic coating. Although the quality of the hardware has a high level of corrosive resistance, the hardware can show some sign of corrosion in salt air environments.

A practical solution to these signs of corrosion would be to wash the product with soap and water. Use a soft bristle brush to scrub the corroding areas of the hardware. Also, use appliance touch up paint in the appropriate color to protect the hardware. Appliance touch up paint can be purchased at local hardware stores

### Poly-Wood is Made in the USA

Are. What happens to all the milk jugs that have been recycled throughout the years? In 1990, in a garage in Northern Indiana, an innovative idea was taking shape. High school friends noted the high performance characteristics of plastic and its use in outdoor applications. Doug Rassi (President) and Mark Phillabaum (Sales), founders and owners of Poly-Wood, Inc., discovered they could extrude recycled milk jugs into plastic lumber. That lumber could then be used to design and build outdoor furniture with fundamental performance qualities.

Since 1990, Poly-Wood, Inc. has been the leader in developing casual outdoor furniture with plastic lumber. Today Poly-Wood occupies over 200,000 square feet of manufacturing space. Our plastic lumber extrusion process is modern and efficient. We utilize 3D design, CNC fabrication and lean manufacturing techniques. Poly-Wood now offers thousands of SKUs and ships a majority of its furniture next day.

Over the years our customers have rewarded us with increased sales because our products perform well over time and are a fantastic value. We remain committed to using the most effective manufacturing techniques, eliminating waste and delivering what our customers expect. Poly-Wood's commitment to quality allows for many relaxing seasons at the beach, in the yard, or on your patio. Sit back, relax and forget about it
