

Important SunBriteTV Placement and Installation Guidelines

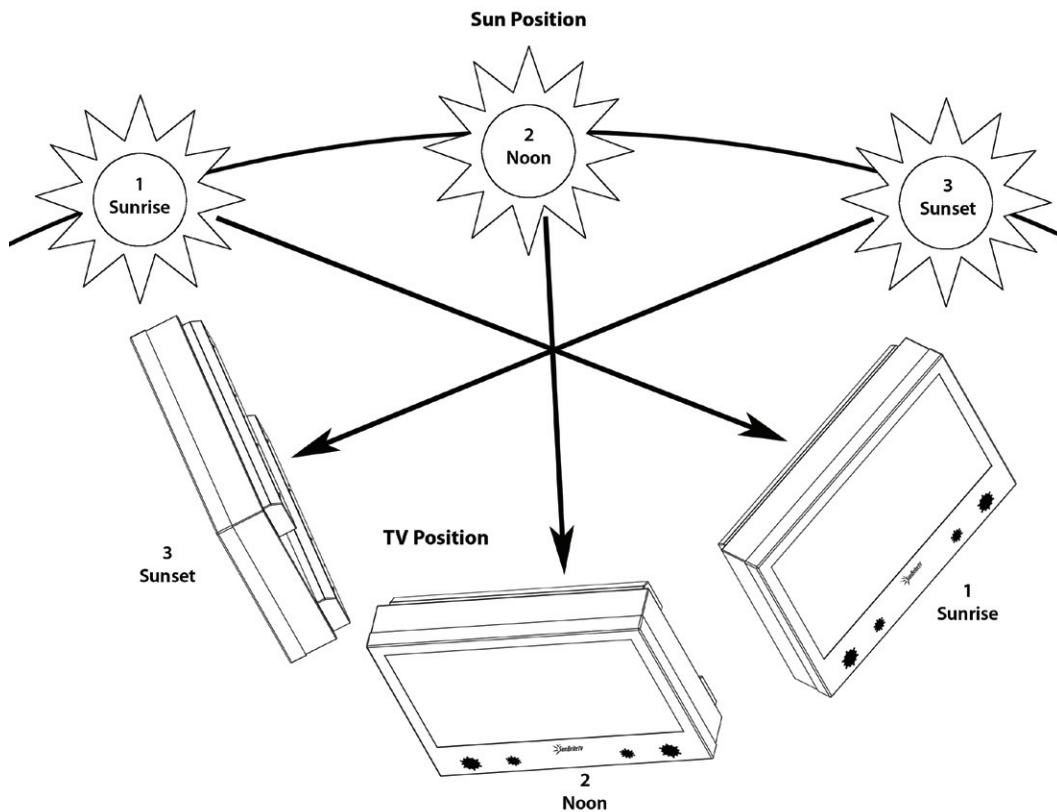

SunBriteTV LCD televisions are twice as bright as indoor LCD TVs. The sun, however, delivers more than 30 times the brightness. Therefore, it is important that you do not place the TV where the screen faces direct sunlight. This will cause the image on the screen to be washed out. .

Intense direct sunlight falling on the screen over an extended period of time, may cause dark spots to form on the screen image. This is a characteristic of LCD TV technology, and is a temporary condition that will go away after the screen is pointed away from the sun.

For optimum viewing, SunBriteTV recommends the following placement and installation guidelines:

1. Ideal placement is in an area where the TV is shaded by trees, landscape and/or structures, or under a patio cover or gazebo.
2. SunBriteTV recommends mounting the TV on SunBriteTV's articulating, tilt and swivel wall mount so the TV screen can be turned away from the location of the sun (see Figure 1).
The articulating wall mount also allows the TV to be rotated away, and angled down from any highly reflective surfaces such as water, white walls, concrete, etc.
3. SunBriteTV recommends using the SunBriteTV Dust Cover when the TV is not in use, especially if the sun is shining on the TV during the day.
